Skills

- C#
- C++
- HTML
- JS
- Lua
- CSS
- HLSL Shaders

Tools & Frameworks

- .NET Core
- Git
- SFML
- Unity3D
- Visual Studio
- VS Code
- CMake
- Vuforia
- Photon
- Playfab

Summary

I'm a software and game developer with a primary focus on C#, C++ and Javascript. Video games were my passion since a very young age, and were what inspired me to start my programming journey.

After many projects were made, I then shifted my gears to web and application development by creating Windows Apps and my portfolio page. I am always eager to learn something new and expand my skillset.

Projects

Corrupted Kin is a Hollow Knight mod built in C# that adds a revamped bossfight. It uses a 2D Wave System created using HLSL shaders and a dynamically updating mesh.

Benefits Calculator allows you to input employee info, calculate their benefits, and save everything to a file. It uses WinForms and [Metro Framework](#) in C# for the GUI.

Dungeon Escape is a top-down exploration game I developed in C++. It uses SFML for the graphics and input and CMake for building the game for multiple platforms.
